

FDM ATR Drugs (436 Spectra)

These ATR spectra were run on a single bounce monolithic diamond ATR crystal. The spectral range is 500 cm⁻¹ to 4000 cm⁻¹ and the optical resolution is 4 cm⁻¹.

Aside from meaningful chemical names the index has the DEA number, DEA Schedule number and the CAS number for many compounds. Some synonyms are also included. The extra details are expected to be useful to law enforcement around the world. Compounds with just a CAS number are not on the DEA Schedule, but might be regulated in other ways, or may serve as drug diluents, are over-the-counter drugs or are otherwise important in drug analysis.
