

## FDM FTIR Surfactants (430 Spectra)

These transmission spectra are useful for those working with both surfactants and polymer additives since the two areas intersect broadly. The spectral range is 500 cm<sup>-1</sup> to 4000 cm<sup>-1</sup> and the optical resolution is 4 cm<sup>-1</sup>.

Contains several surveys of important families of compounds are covered including:

PEG 200-6000 mono[ laurates, stearates, oleates, ricinoleates]

PEG 200-6000 di[ laurates, stearates, oleates ]
